
tractorgrassing

Evergreen Landcare can provide a cost effective grass seed and fertilizing service to customers throughout New Zealand. This includes scarification of the soil prior to sowing using specialist equipment. Seed and fertilizer are then spread evenly over the seed bed before being lightly covered with soil and firmed.

Evergreen Landcare also has smaller equipment for areas with difficult access. All equipment will be delivered to your site using our own transporter, minimising delays and cost. We specialise in grass sowing for landscape and amenity purposes involving relatively small areas.
